

ARONIA BERRY EXTRACT

(*Aronia melanocarpa*)

Category: Anti-Oxidant, Cardiovascular Support

Description: Aronia berries (also known as Black Chokeberries) have the highest concentration of natural phenolic acid anti-oxidants of any edible berry. These anti-oxidants include anthocyanidins, proanthocyanidins and polyphenols all of which are well known “free-radical fighters” and give the extract an extremely high ORAC value.

Our extract is manufactured in Germany by Kaden Biochemicals GmbH. The richness of the berries is concentrated and protected using a proprietary extraction technique. In recent years, studies on Aronia berry extract have demonstrated numerous health-benefiting properties, including reduction in blood pressure, the oxidation of LDL cholesterol, detoxification, anti-inflammatory properties and inhibition of cytokines (TNF α and IL-6).

- Clinically proven to promote healthy blood pressure
- Powerful Antioxidant (ORAC ~ 7300 μ mole TE/g)
- Promotes healthy cholesterol levels (LDL oxidation)

Specifications: **Appearance:** Dark violet free-flowing powder
Anthocyanidins: Minimum 15% (HPLC)
Polyphenols: Minimum 50%
Proanthocyanidin A2: Detected and quantified
